DETAILED ACTION

1. Claims 1-14, 16-22 and 24 are pending.
2. Appeal Brief filed 01/21/2009 (with corrections filed 07/07/2009) has been received and considered.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Luke Pedersen (Reg. No. 45,003) on 09/16/2009.

The application has been amended as follows:

Claim 1 (Currently Amended) A method of detecting script language viruses in data streams comprising:

using a processor for:

preparing language description data corresponding to at least one script language; preparing detection data for viral code corresponding to a script language virus; lexically analyzing a data stream to identify the at least one script language;

lexically analyzing the data stream using the language description data to generate a stream of tokens;

generating viral code detection data by analyzing a plurality of samples of polymorphic script language viral code; and

lexically analyzing the stream of tokens using the detection data and the language description data to identify the script language virus.

Claim 13 (Currently Amended) A program storage device readable by a machine, tangibly embodying a program of instructions executable by the machine to perform method steps for detecting script language viruses, the method steps comprising:

preparing language description data corresponding to at least one script language; preparing detection data for viral code corresponding to a script language virus; lexically analyzing a data stream to identify the at least one script language;

lexically analyzing the data stream using the language description data to generate a stream of tokens;

generating viral code detection data by analyzing a plurality of samples of polymorphic script language viral code; and

lexically analyzing the stream of tokens using the detection data and the language description data to identify the script language virus.

Claim 14 (Currently Amended) A computer system, comprising: a processor; and a program storage device readable by the computer system, tangibly embodying a program of instructions executable by the processor to perform method steps for detecting script language viruses, the method steps comprising:

preparing language description data corresponding to at least one script language; preparing detection data for viral code corresponding to a script language virus; and lexically analyzing a data stream to identify the at least one script language;

lexically analyzing the data stream using the language description data to generate a stream of tokens;

generating viral code detection data by analyzing a plurality of samples of polymorphic script language viral code; and

lexically analyzing the stream of tokens using the detection data and the language description data to identify the script language virus.

Claim 16 (Currently Amended) An apparatus for detecting script language viruses, comprising:

a script language processor, wherein the script language processor prepares language description data corresponding to at least one script language;

a detection data processor, wherein the detection data processor ~~prepared~~ prepares detection data for viral code corresponding to a script language virus and wherein the detection data processor generates viral code detection data by analyzing a plurality of samples of polymorphic script language viral code; and

a detection engine, wherein the detection engine converts a data stream to a stream of tokens using lexical analysis, wherein the tokens correspond to respective language constructs, wherein the detection engine lexically analyzes the stream of tokens using the language description data and the detection data to identify the script language virus.

Claim 24 (Currently Amended) A method, comprising:

using a processor for:

receiving a data stream;

lexically analyzing the data stream to identify a script language; receiving language description data for the script language;

lexically analyzing the data stream using the language description data to generate a stream of tokens;

generating viral code detection data by analyzing a plurality of samples of polymorphic script language viral code; and

lexically analyzing the stream of tokens using the viral code detection data and the language description data to identify at least one script language virus.

Allowable Subject Matter

4. Claims 1-14, 16-22 and 24 are allowed.
5. The following is an examiner's statement of reasons for allowance: The prior art teaches methods of detecting script language viruses by preparing language description data corresponding to at least one script language and preparing detection data for viral code corresponding to a script language virus and performing lexical analysis to identify a script language and generate a stream of tokens. The prior art also generally teaches generating viral code detection data and performing lexical analysis on a stream of tokens. However, the prior art does not specifically disclose analyzing a plurality of samples of polymorphic script language viral code nor does the prior art teach lexically analyzing a stream of tokens to identify at least one script language virus. As such the prior art fails to disclose "generating viral code detection data by analyzing a plurality of samples of polymorphic script language viral code; and lexically analyzing the stream of tokens using the viral code detection data and the language description data to identify at least one script language virus" as similarly claimed in each of the independent claims when in combination with the remaining claimed limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
